

# Introduction to the web

présenté par Hamza haj belgacem

# How does the web work ?

When you want to view any page on the Web, you must initiate the activity by requesting a page using your browser. The browser asks a domain name server to translate the domain name you requested into an IP address. The browser then sends a request to that server for the page you want, using a standard called Hypertext Transfer Protocol or HTTP

# • What do you need to be a web developer?

Programming languages and platforms are what developers use to create applications, scripts, or other sets of instructions for computers to follow. There are dozens of different programming languages. Each language uses a different platform or program to write scripts, programs, and instructions therefor you need to become familiar with html, css, javascript and other languages

# What is the role of a web developer?

- **Ajouter des ligWrite well designed, testable, efficient code by using best software development practices**
